The use of the trademark pluronic L61 has been noted in this application. It should be capitalized wherever it appears and be accompanied by the generic terminology.

Although the use of trademarks is permissible in patent applications, the proprietary nature of the marks should be respected and every effort made to prevent their use in any manner which might adversely affect their validity as trademarks.

Claims 1-12, 18-28, 34-43, 49-52, 57-60, 65-68 and 73-75 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claims 1 contain the trademark/trade name pluronic L61. Where a trademark or trade name is used in a claim as a limitation to identify or describe a particular material or product, the claim does not comply with the requirements of 35 U.S.C. 112, second paragraph. See *Ex parte Simpson*, 218 USPQ 1020 (Bd. App. 1982). The claim scope is uncertain since the trademark or trade name cannot be used properly to identify any particular material or product. A trademark or trade name is used to identify a source of goods, and not the goods themselves. Thus, a trademark or trade name does not identify or describe the goods associated with the trademark or trade name. In the present case, the trademark/trade name is used to identify/describe copolymers of propylene oxide and ethylene oxide and, accordingly, the identification/description is indefinite.

Art Unit: 1623

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-12, 18-28, 34-43, 49-52, 57-60, 65-68 and 73-75 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cratolo et al (U.S. Patent No. 5,605,889) in combination with the International Patent WO 99/39731.

Curatolo et al disclose oral delivery of azithromycin and also discloses therapeutic packages of azithromycin containing the dosage forms (column 2, lines 35-61). The international Patent discloses that oral delivery of many drugs, including erythromycin (page 36, last line) can be improved by administering said drugs in combination with copolymers of propylene oxide and ethylene oxide and specifically teaches on page 17 that the use of Pluronic L61 is preferred. Therefore, a person having ordinary skill in the art at the time the instant invention was made would have

Art Unit: 1623

been motivated to combine azithromycin with Pluronic L61 in order to improve its oral delivery.
